### 01. PROOFS

#### sets of numbers

 $\mathbb{N}$ : natural numbers ( $\mathbb{Z}_{\geq 0}$ )

 $\mathbb{Z}$ : integers

① : rational numbers

R: real numbers

C: complex numbers

### basic properties of integers

closure (under addition and multiplication)  $x + y \in \mathbb{Z} \land xy \in \mathbb{Z}$ commutativity  $a + b = b + a \wedge ab = ba$ associativity a + b + c = a + (b + c) = (a + b) + cabc = a(bc) = (ab)cdistributivity a(b+c) = ab + actrichotomy  $(a < b) \lor (a > b) \lor (a = b)$ transitive law

 $(a < b) \land (b < c) \implies (a < c)$ 

### definitions

### even/odd n is even $\leftrightarrow \exists k \in \mathbb{Z} \mid n = 2k$ $n \text{ is odd} \leftrightarrow \exists k \in \mathbb{Z} \mid n = 2k + 1$ prime/composite n is prime $\leftrightarrow n > 1$ and $\forall r, s \in \mathbb{Z}^+, n = rs \to (r = rs)$ $n) \vee (r = s)$ n is composite $\leftrightarrow n > 1$ and $\exists r, s \in \mathbb{Z}^+ s.t.n =$ rs and 1 < r < n and 1 < s < ndivisibility (d divides n) $d \mid n \leftrightarrow \exists k \in \mathbb{Z} \mid n = kd$ rationality r is rational $\leftrightarrow \exists a, b \in \mathbb{Z} \mid r = \frac{a}{1}$ and $b \neq 0$ floor/ceiling |x|: largest integer y such that y < x $\lceil x \rceil$ : smallest integer y such that y > x

#### rules of inference

	1
generalisation	elimination
$p, \therefore p \lor q$	$p \lor q; \sim q, : p$
specialisation	transitivity
$p \wedge q, \therefore p$	$p \to q; q \to r; : p \to$

## 04. METHODS OF PROOF

# Proof by Exhaustion/Cases

- 1. list out possible cases 1.1. Case 1: n is odd OR If n = 9, ...
- 1.2. Case 2: n is even OR If n = 16....
- 2. therefore ...

# **Proof by Contradiction**

1. Suppose that ...

1.1. <proof>

1.2. ... but this contradicts ...

2. Therefore the assumption that ... is false. Hence ....

### **Proof by Contraposition**

1. Contrapositive statement:  $\sim q \rightarrow \sim p$ 

2. let  $\sim q$ 

2.1. <proof>

2.2. hence  $\sim p$ 

3.  $p \rightarrow q$ 

### **Proof by Construction**

1. Let x = 3, y = 4, z = 5.

2. Then  $x, y, z \in \mathbb{Z}_{\geq 1}$  and

 $x^{2} + y^{2} = 3^{2} + 4^{2} = 9 + 16 = 25 = 5^{2}$ .

3. Thus  $\exists x, y, z \in \mathbb{Z}_{>1}$  such that  $x^2 + y^2 = z^2$ .

### **Proof by Induction**

- 1. For each  $n \in \mathbb{Z}_{\geq 1}$ , let P(n) be the proposition "..."
- 2. (base step) P(1) is true because <manual method>
- 3. (induction step)
  - 3.1. let  $k \in \mathbb{Z}_{>1}$  s.t. P(k) is true
  - 3.2. Then ...
  - 3.3. proof that P(k+1) is true e.g.  $P(k+1) = P(k) + term_{k+1}$
  - 3.4. So P(k + 1) is true.
- 4. Hence  $\forall n \in \mathbb{Z}_{\geq 1} P(n)$  is true by MI.

#### Proofs for Sets

### Equality of Sets (A=B)

 $1. (\Rightarrow)$ 

1.1. Take any  $z \in A$ .

1.2. . . .

1.3.  $z \in B$ .

2. (\(\phi\))

2.1. Take any  $z \in B$ .

2.2. . . .

2.3.  $\therefore z \in A$ .

#### **Element Method**

1.  $A \cap (B \setminus C) = \{x : x \in A \land x \in (B \setminus C)\}$  (by def. of  $\cap$ ) 2. =  $\{x : x \in A \land (x \in B \land x \notin C)\}\$  (by def. of \) 3. ...

4. =  $(A \cap B) \setminus C$  (by def. of \)

### Other Proofs

### iff $(A \leftrightarrow B)$

1.  $(\Rightarrow)$  Suppose A.

1.1. ... <proof> ...

1.2. Hence  $A \rightarrow B$ 

2.  $(\Leftarrow)$  Suppose B.

2.1. ... <proof> ...

2.2. Hence  $B \rightarrow A$ 

### 02. COMPOUND STATEMENTS

### operations

 $1 \sim$ : negation (not)

2 ∧ : conjunction (and)

2  $\vee$  : disjunction (or) - coequal to  $\wedge$ 

 $3 \rightarrow : if-then$ 

### logical equivalence

- · identical truth values in truth table
- definitions
- · to show non-equivalence:
  - truth table method (only needs 1 row)
  - · counter-example method

#### conditional statements

hypothesis → conclusion

 $antecedent \rightarrow consequent$ 

· vacuously true : hypothesis is false

• implication law :  $p \to q \equiv \sim p \lor q$ 

· common if/then statements:

• if p then q:  $p \rightarrow q$ 

• p if q:  $q \rightarrow p$ 

• p only if q:  $p \rightarrow q$ 

 $\bullet \text{ p iff q: } p \leftrightarrow q$ 

ullet contrapositive :  $\sim \! q 
ightarrow \sim \! p$ converse ≡ inverse • inverse :  $\sim p \rightarrow \sim q$ statement = contra-

• converse :  $q \rightarrow p$ positive

• r is a **necessary** condition for s:  $\sim r \rightarrow \sim s$  and  $s \rightarrow r$ 

• r is a **sufficient** condition for s:  $r \rightarrow s$ 

necessary & sufficient : ↔

# valid arguments

- determining validity: construct truth table
  - valid  $\leftrightarrow$  conclusion is true when premises are true
- syllogism: (argument form) 2 premises, 1 conclusion
- modus ponens :  $p \rightarrow q$ ; p;  $\therefore q$
- modus tollens :  $p \to q$ ;  $\sim q$ ;  $\therefore \sim p$
- · sound argument: is valid & all premises are true

#### fallacies

inverse error
p  o q
$\sim p$
$\therefore \sim q$

## 03. QUANTIFIED STATEMENTS

- truth set of  $P(x) = \{x \in D \mid P(x)\}$
- $P(x) \Rightarrow Q(x) : \forall x (P(x) \rightarrow Q(x))$
- $P(x) \Leftrightarrow Q(x) : \forall x (P(x) \leftrightarrow Q(x))$

#### relation between $\forall . \exists . \land . \lor$

- $\forall x \in D, Q(x) \equiv Q(x_1) \land Q(x_2) \land \cdots \land Q(x_n)$
- $\exists x \in D \mid Q(x) \equiv Q(x_1) \lor Q(x_2) \lor \cdots \lor Q(x_n)$

### **05. SETS**

#### notation

```
• set roster notation [1]: \{x_1, x_2, \ldots, x_n\}
• set roster notation [2]: \{x_1, x_2, x_3, \dots\}
```

• set-builder notation:  $\{x \in \mathbb{U} : P(x)\}$ 

#### definitions

```
• equal sets : A = B \leftrightarrow \forall x (x \in A \leftrightarrow x \in B)
```

• 
$$A = B \leftrightarrow (A \subseteq B) \land (A \supset B)$$

empty set, ∅ : ∅ ⊂ all sets

• subset :  $A \subseteq B \leftrightarrow \forall x (x \in A \rightarrow x \in B)$ 

• proper subset :  $A \subseteq B \leftrightarrow (A \subseteq B) \land (A \neq B)$ 

• power set of A :  $\mathcal{P}(A) = \{X \mid X \subseteq A\}$ 

•  $|\mathcal{P}(A)| = 2^{|A|}$ , given that A is a finite set

• cardinality of a set, |A|: number of distinct elements

• singleton : sets of size 1

• disjoint :  $A \cap B = \emptyset$ 

### methods of proof for sets

- · direct proof
- · element method
- truth table

### boolean operations

```
• union: A \cup B = \{x : x \in A \lor x \in B\}
```

• intersection:  $A \cap B = \{x : x \in A \land x \in B\}$ 

• complement (of B in A):  $A \setminus B = \{x : x \in A \land x \notin B\}$ 

• complement (of B):  $\bar{B}$  or  $B^c = U \backslash B$ 

• set difference law:  $A \backslash B = A \cap \bar{B}$ 

# ordered pairs and cartesian products

• ordered pair : (x, y)

•  $(x,y) = (x',y') \leftrightarrow x = x'$  and y = y'

· Cartesian product :

 $A \times B = \{(x, y) : x \in A \text{ and } y \in B\}$ 

•  $|A \times B| = |A| \times |B|$ • ordered tuples : expression of the form  $(x_1, x_2, \dots, x_n)$ 

# 06. FUNCTIONS

# definitions

• function/map from A to B: assignment of each element of A to exactly one element of B.

•  $f:A\to B$  : "f is a function from A to B"

•  $f: x \rightarrow y$ : "f maps x to y" • domain of f = A

• codomain of f = B • range/image of f =  $\{f(x) : x \in A\}$ 

 $= \{ y \in B \mid y = f(x) \text{ for some } x \in A \}$ • identity function on A,  $id_A : A \rightarrow A$ 

•  $id_A: x \to x$ 

• range = domain = codomain = A

• well-defined function : every element in the domain is assigned to exactly one element in the codomain

#### equality of functions

- · same codomain and domain
- for all  $x \in \text{codomain}$ , same output

### function composition

- $(g \circ f)(x) = g(f(x))$
- for  $(g\circ f)$  to be well defined, codomain of f must be equal to the domain of g
- × commutative
- ✓ associative

### image & pre-image

for  $f:A \to B$ 

• if  $X \subseteq A$ , image of X,

 $f(X) = \{ y \in B : y = f(x) \text{ for some } x \in X \}$ 

• if  $Y \subseteq B$ , pre-image of Y,

 $f^{-1}(Y) = \{x \in A : y = f(x) \text{ for some } y \in Y\}$ 

# injection & surjection

- surjective (onto) : codomain = range
  - $\forall y \in B, \exists x \in A (y = f(x))$
  - surjective test:  $\forall Y\subseteq B, Y\subseteq f(f^{-1}(Y))$
- injective : one-to-one
- $\forall x, x' \in A(f(x) = f(x') \Rightarrow x = x')$
- injective test:  $\forall X \subset A, X \subset f^{-1}(f(X))$
- bijective : both surjective & injective
- has an inverse

#### inverse

•  $\forall x \in A, \forall y \in B(f(x) = y \Leftrightarrow g(y) = x)$ 

### 07. INDUCTION

#### mathematical induction

to prove that  $\forall n \in \mathbb{Z}_{\geq m}(P(n))$  is true,

- base step: show that P(m) is true
- induction step: show that  $\forall k \in \mathbb{Z}_{\geq m}(P(k) \Rightarrow P(k+1))$  is true.
  - induction hypothesis: assumption that P(k) is true

### strong MI

to prove that  $\forall n \in \mathbb{Z}_{\geq 0}(P(n))$  is true,

- base step: show that P(0), P(1) are true
- · induction step: show that

 $\forall k \in \mathbb{Z}_{>0}(P(0) \cdots \wedge P(k+1) \Rightarrow P(k+2))$  is true.

justification:

- $P(0) \wedge P(1)$  by base case
- $P(0) \wedge P(1) \rightarrow P(2)$  by induction with k=0
- $P(0) \wedge P(1) \wedge P(2) \rightarrow P(3)$  by induction with k=1
- ...
- we deduce that  $P(0), P(1), \ldots$  are all true by a series of **modus ponens**

## well-ordering principle

- every nonempty subset of  $\mathbb{Z}_{\geq 0}$  has a smallest element.
- · application: recursion has a base case

#### RECURSION

a sequence is **recursively defined** if the definition of  $a_n$  involves  $a_0, a_1, \ldots, a_{n-1}$  for all but finitely many  $n \in \mathbb{Z}_{>0}$ .

#### recursive definitions

e.g. recursive definition for  $\mathbb{Z}$ 

- 1. (base clause)  $0 \in \mathbb{Z}_{\geq 0}$
- 2. (recursion clause) If  $x \in \mathbb{Z}_{\geq 0}$ , then  $x + 1 \in \mathbb{Z}_{\geq 0}$
- (minimality clause) Membership for Z≥0 can be demonstrated by (finitely many) successive applications of the clauses above

#### recursion vs induction

- · recursion to define the set
- · induction to show things about the set

# well-formed formulas (WFF)

### in propositional logic

define the set of WFF( $\Sigma$ ) as follows

- 1. (base clause) every element  $\rho$  of  $\Sigma$  is in WFF( $\Sigma$ )
- 2. (recursion clause) if x,y are in WFF( $\Sigma$ ), then  $\sim x$  and  $(x \wedge y)$  and  $(x \vee y)$  are in WFF( $\Sigma$ )
- (minimality clause) Membership for WFF(Σ) can be demonstrated by (finitely many) successive applications of the clauses above

# 08. NUMBER THEORY

# divisibility

•  $n \mod d$  is always non-negative.

transitivity of divisibility If  $a \mid b$  and  $b \mid c$ , then  $a \mid c$ .

closure lemma (non-standard name)

Let  $a,b,d,m,n\in\mathbb{Z}.$  If  $d\mid m$  and  $d\mid n$ , then  $d\mid am+bn.$  division theorem

 $\forall n \in \mathbb{Z} \text{ and } d \in \mathbb{Z}^+, \ \exists !q, r \in \mathbb{Z} \text{ s.t.} \\ n = dq + r \text{ and } 0 \leq r < d \\ q = n \ div \ d = \lfloor n/d \rfloor \\ r = n \ mod \ d = n - dq$ 

## base-b representation

of positive integer n is  $(a_\ell a_{\ell-1} \dots a_0)_b$  where  $\ell \in \mathbb{Z}_{\geq 0}$  and  $a_0, a_1, \dots, a_\ell \in \{0, 1, \dots, b-1\}$  s.t.  $n = a_\ell b^\ell + a_{\ell-1} b^{\ell-1} + \dots + a_0 b^0$  and  $a_\ell \neq 0$ 

## greatest common divisor

- $m \mod n$
- if  $m \neq 0$  and  $n \neq 0$ , then gcd(m, n) exists and is positive.
- Euclidean Algorithm for finding gcd

### Bezout's Lemma:

For all  $m,n\in\mathbb{Z}$  with  $n\neq 0$ , there exist  $s,t\in\mathbb{Z}$  such that  $\gcd(m,n)=ms+nt.$  Euclid's Lemma:

Let  $m, n \in \mathbb{Z}^+$ . If p is prime and  $p \mid mn$ , then  $p \mid m$  or  $p \mid n$ .

### prime factorization

- Fundamental Theorem of Arithmetic: Every integer n 

   2 has a unique prime factorization in which the prime factors are arranged in nondecreasing order.
  - aka Prime Factorisation Theorem

### modular arithmetic

Let  $a,b,c\in\mathbb{Z}$  and  $n\in\mathbb{Z}^+$ . congruence  $a\equiv b\ (\bmod n)\Leftrightarrow a\bmod n=b\bmod n$  Then  $\exists k\in\mathbb{Z}\mid a=nk+b$  and  $n\mid (a-b)$  reflexivity  $a\equiv a\ (\bmod n)$  symmetry  $a\equiv b\ (\bmod n)\to b\equiv a\ (\bmod n)$  transitivity  $a\equiv b\ (\bmod n)\to b\equiv c\ (\bmod n)$ 

#### additive inverse

b is an additive inverse of  $a \mod n \Leftrightarrow a+b \equiv 0 \pmod n$ . b is an additive inverse of  $a \mod n \Leftrightarrow b \equiv -a \pmod n$ .

### multiplicative inverse

b is a multiplicative inverse of  $a \mod n \Leftrightarrow ab \equiv 1 \pmod n$ .

- If b, b' are multiplicative inverses of a, then  $b \equiv b' \pmod{n}$ .
- exists  $\Leftrightarrow \gcd(a, n) = 1$ .
- a, n are coprime
- · to find multiplicative inverse: Euclidean Algorithm

# 09. EQUIVALENCE RELATIONS

#### relations

Let R be a relation from A to B and  $(x,y) \in A \times B$ . Then: xRy for  $(x,y) \in R$  and xRy for  $(x,y) \notin R$ 

- A relation from A to B is a subset of  $A \times B$ .
- A (binary) relation on set A is a relation from A to A.
   subset of A<sup>2</sup>

### reflexivity, symmetry, transitivity

Let A be a set and R be a relation on A.

 $\label{eq:continuous_continuous$ 

- equivalence relation: a relation that is reflexive, symmetric and transitive
- equivalence class: the set of all things equivalent to x

### equivalence classes

Let A be a set and R be an equivalence relation on A.

- $[x]_R$ : equivalence class of x with respect to R $\forall x \in A, [x]_R = \{y \in A : xRy\}$
- ullet A/R: The set of all equivalent classes

$$A/R = \{ [x]_R : x \in A \}$$
$$xRy \Rightarrow [x] = [y] \Rightarrow [x] \cap [y] \neq \emptyset$$

### partitions

- a partition of a set A is a set  $\mathscr C$  of non-empty subsets of A such that

$$(\geq 1) \ \forall x \in A, \ \exists S \in \mathscr{C}(x \in S)$$
 
$$(\leq 1) \ \forall x \in A, \ \forall S, S' \in \mathscr{C}(x \in S \land x \in S' \Rightarrow S = S')$$

- components : elements of a partition
- every partition comes from an equivalence relation

#### partial orders

Let A be a set and R be a relation on A.

- R is antisymmetric if  $\forall x, y \in A (xRy \land yRx \rightarrow x = y)$
- includes vacuously true cases (e.g.  $xRy \Leftrightarrow x < y$ )
- Includes vacuously true cases (e.g.  $x \pi y \Leftrightarrow x < y$
- x and y are comparable if  $\forall x,y \in A \ (xRy \lor yRx)$
- R is a (non-strict) partial order if R is reflexive, antisymmetric and transitive.

  - $x \prec y \Leftrightarrow x \preccurlyeq y \land x \neq y$  (NOT a partial order)
  - Hasse diagram
- R is a **(non-strict) total order** if R is a partial order and x and y are comparable

#### min and max

Let  $\leq$  be a partial order on a set A, and  $c \in A$ .

- c is a minimal element if  $\forall x \in A \ (x \leq c \Rightarrow c = x)$ 
  - · nothing is strictly below it
- c is a maximal element if  $\forall x \in A \ (c \preccurlyeq x \Rightarrow c = x)$ 
  - · nothing is strictly above it
- c is the smallest element or minimum element if  $\forall x \in a \ (c \le x)$ .
- c is the largest element or maximum element if  $\forall x \in a \ (x \leq c)$ .

#### linearization

Let A be a set and  $\preccurlyeq$  be a partial order on A. Then there exists a total order  $\preccurlyeq^*$  on A such that  $\forall x,y \in A \ (x \preccurlyeq y \Rightarrow x \preccurlyeq^* y)$ 

### **10A. COUNTING**

### permutations

$$P(n,r) = \frac{n!}{(n-r)!} \quad \text{(also } nP_r, P_r^n\text{)}$$

- multiplication/product rule: An operation of k steps can be performed in  $n_1 \times n_2 \times \cdots \times n_k$  ways.
- addition/sum rule: Suppose a finite set A equals the union of k distinct mutually disjoint subsets  $A_1,A_2,\ldots,A_k$ . Then
- $|A|=|A_1|+|A_2|+\cdots+|A_k|$  difference rule: if A is a finite set and  $B\subset A$ , then
- $|A \backslash B| = |A| = |B|$  complement:  $P(\bar{A}) = 1 P(A)$
- complement: P(A) = 1 P(A)• inclusion/exclusion rule:  $|A \cup B \cup C| = 1$
- Inclusion/exclusion rule:  $|A \cup B \cup C| = |A| + |B| + |C| |A \cap B| |B \cap C| |C \cap A| + |A \cap B \cap C|$

### permutations with indistinguishable objects

For n objects with  $n_k$  of type k indistinguishable from each other, the total number of distinguishable permutations  $= \frac{n!}{n_1! n_2! \dots n_k!}$ 

# pigeonhole principle

For any function f from a finite set X with n elements to a finite set Y with m elements and for any positive integer k, if  $k<\frac{n}{m}$ , then there is some  $y\in Y$  such that y is the image of at least k+1 distinct elements of X.

A function from a finite set to a smaller finite set cannot be injective.

### combinations

$$\binom{n}{r} = \frac{n!}{r!(n-r)!} \text{ (also } C(n,r),\, {}_{n}C_{r},\, C_{n,r},\, {}^{n}C_{r} )$$
 
$$r\text{-combinations from } n \text{ elements with } \mathbf{repetition} \\ = \binom{r+n-1}{r}$$

#### pascal's formula

Suppose 
$$n,r\in\mathbb{Z}^+$$
 with  $r\le n.$  Then  $\binom{n+1}{r}=\binom{n}{r-1}+\binom{n}{r}$ 

#### binomial theorem

$$(a+b)^n = \sum_{k=0}^n \binom{n}{k} a^{n-k} b^k$$
 binomial coefficient:  $\binom{n}{k}$ 

### **10B. PROBABILITY**

### probability

Let S be a sample space. For all events A and B in S, a probability function P satisfies the following axioms:

- 1.  $0 \le P(A) \le 1$
- 2.  $P(\emptyset) = 0$  and P(S) = 1
- 3.  $(A \cap B = \emptyset) \Rightarrow [P(A \cup B) = P(A) + P(B)]$
- 4.  $P(\bar{A}) = 1 P(A)$
- 5.  $P(A \cup B) = P(A) + P(B) P(A \cap B)$

### expected value

For possible outcomes  $a_1, a_2, \ldots, a_n$  which occur with probabilities  $p_1, p_2, \ldots, p_n$ , the **expected value** is

$$\sum_{k=1}^{n} = a_k p_k$$

• **linearity** of expectation

• 
$$E[X + Y] = e[X] + E[Y]$$
  
•  $E\left[\sum_{i=1}^{n} c_i \cdot X_i\right] = \sum_{i=1}^{n} (c_i \cdot E[X_i])$ 

#### conditional probability

The conditional probability of A given B,  $P(A \mid B) = P(A \cap B)$ 

$$P(A \mid B) = \frac{P(A \cap B)}{P(B)}$$

probability tree:

$$P(B_1) = \frac{1}{3} B_1$$

$$P(B_2 \mid B_1^c) \longrightarrow B_2 \to P(B_1^c \cap B_2) = \dots$$

$$P(B_2^c \mid B_1^c) \longrightarrow B_2^c \to P(B_1^c \cap B_2^c) = \dots$$

### bayes' theorem

Suppose a sample space S is a union of mutually disjoint events  $B_1,B_2,\ldots,B_n$  and A is an event in S. For  $k\in\mathbb{Z}$  and  $1\leq k\leq n$ ,

$$P(B_k \mid A) = \frac{P(A|B_k) \cdot P(B_k)}{\sum\limits_{i=1}^{n} \left( P(A|B_i) \cdot P(B_i) \right)}$$

### independent events

$$A$$
 and  $B$  are independent iff  $P(A \cap B) = P(A) \cdot P(B)$ 

#### A, B and C are pairwise independent iff

1. 
$$P(A \cap B) = P(A) \cdot P(B)$$

$$2. P(B \cap C) = P(B) \cdot P(C)$$

3. 
$$P(A \cap C) = P(A) \cdot P(C)$$

### A, B and C are mutually independent iff

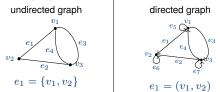

1. A, B and C are pairwise independent

# $2. P(A \cap B \cap C) = P(A) \cdot P(B) \cdot P(C)$

### 11. GRAPHS

 mathematical structures used to model pairwise relations between objects

### types of graphs

### undirected graph

- denoted by G = (V, E), comprising
  - nonempty set of *vertices/nodes*,  $V = \{v_1, v_2, \dots, v_n\}$
  - a set of *edges*,  $E = \{e_1, e_2, \cdots, e_k\}$
- $e = \{v, w\}$  for an undirected edge E incident on vertices v and w

#### directed graph

- denoted by G = (V, E), comprising
  - ullet nonempty set V of  $\mathit{vertices}$
- a set E of *directed edges* (ordered pair of vertices)
- ullet e=(v,w) for an directed edge E from vertex v to vertex w

### simple graph

• undirected graph with no loops or parallel edges

#### complete graph

 a complete graph on n vertices, n > 0, denoted K<sub>n</sub>, is a simple graph with n vertices and exactly one edge connecting each pair of distinct vertices

### bipartite graph

- a simple graph whose vertices can be divided into two disjoint sets U and V such that every edge connects a vertex in U to one in V
- · complete bipartite graph:
  - bipartite graph on two disjoint sets U and V such that every vertex in U connects to every vertex in V• if csakifnadlfsjasdij

# subgraph of a graph

dsigfdkhlafn

### degree

- **degree** of v, deg(v) = number of edges incident on v
- total degree of G = sum of the degrees of all vertices of G total degree of G =  $2\times$  (number of edges of G)
- C10.1.2 the total degree of a graph is even
- P10.1.3 in any graph there are an even number of vertices of odd degree

## trails, paths and circuits

Let G be a graph; let v and w be vertices of G.

- walk (from v to w): a finite alternating sequence of adjacent vertices and edges of G.
- e.g.  $v_0e_1v_1e_2\dots v_{n-1}e_nv_n$

- length of walk: the number of edges, n
- ullet a **trivial walk** from v to v consists of the single vertex v
- ${\bf trail}$  (from v to w): a walk from v to w that does not contain a repeated edge
- path (from v to w): a trail that does not contain a repeated vertex
- closed walk: walk that starts and ends at the same vertex
- circuit/cycle: an undirected graph G(V, E) where

• 
$$V = \{1, x_2, \dots, x_n\}$$
  
•  $E = \{\{x_1, x_2\}, \{x_2, x_3\}, \dots, \{x_{n-1}, x_n\}, \{x_n, x_1\}\}$ 

- aka a closed walk that does not contain a repeated edge
- simple circuit/cycle: does not have any other repeated vertex except the first and last
- (an undirected graph is) **cyclic** if it contains a loop/cycle

#### connectedness

- vertices v and w are connected  $\Leftrightarrow \exists$  a walk from v to w
- graph G is connected  $\Leftrightarrow \forall$  vertices  $v,w \in V, \exists$  a walk from v to w

### connected component

- a connected subgraph of the largest possible size
- $\bullet \ {\rm graph} \ H \ {\rm is} \ {\rm a} \ {\rm connected} \ {\rm component} \ {\rm of} \ {\rm graph} \ G \Leftrightarrow$ 
  - 1. H is a subgraph of G
  - 2. H is connected
  - 3. no connected subgraph of G has H as a subgraph and contains vertices or edges that are not in H

#### **Euler circuit**

- Euler circuit: a circuit that contains every vertex and traverses every edge of *G* exactly once
- Eulerian graph: graph that contains an Euler circuit

#### T10.2.4

Eulerian graph ⇔ every vertex has positive even degree

 Euler trail (from v to w): a sequence of adjacent edges and vertices that starts at v, ends at w, and passes through every vertex of G at least once, and traverses every edge of G exactly once.

#### C10.2.5

 $\exists$  Euler trail  $\Leftrightarrow$  G is connected; v, w have odd degree; all other vertices of G have positive even degree

### proven:

- L1E1 the product of 2 consecutive odd numbers is always odd.
- L1E5 the difference between 2 consecutive squares is always odd
- L4E4 the sum of any 2 even integers is even
- · L4T4.6.1 there is no greatest integer
- L4T4.3.1 for all positive integers a and b, if a|b, then  $a \leq b$ .
- L1P4.6.4 for all integers n, if  $n^2$  is even then n is even
- L4T4.2.1 all integers are rational numbers
- L4T4.2.2 the sum of any 2 rational numbers is rational
- L1E7 there exist irrational numbers p and q such that  $p^q$  is rational
- L4T4.7.1  $\sqrt{2}$  is irrational.
- L4T4.3.2 the only divisors of 1 are 1 and -1.
- L4T4.3.3 transitivity of divisibility
  - if a|b and b|c, then a|c.
- · L3T3.2.1 negation of a universal statement:
  - $\sim (\forall x \in D, P(x)) \equiv \exists x \in D \mid \sim P(x)$
- L3T3.2.2 negation of an existential statement:
  - $\sim (\exists x \in D \mid P(x)) \equiv \forall x \in D, \sim P(x)$
- L5T5.1.14 there exists a unique set with no element. It is denoted by ∅.
- L5E5.3.7 for all  $A, B: (A \cap B) \cup (A \setminus B) = A$
- L5T5.3.11(1) let A, B be disjoint finite sets. Then  $|A \cup B| = |A| + |B|$
- L5T5.3.11(2) let  $A_1, A_2, \ldots, A_n$  be pairwise disjoint finite sets. Then
- $|A_1 \cup A_2 \cup \cdots \cup A_n| = |A_1| + |A_2| + \cdots + |A_n|$
- L5T5.3.12 Inclusion-Exclusion Principle:
  - for all finite sets A and B,  $|A \cup B| = |A| + |B| |A \cap B|$
- L6T6.1.26 associativity of function composition:
  - $f \circ (a \circ h) = (f \circ a) \circ h$
- L6P2.6.16 uniqueness of inverses:
  - If q, q' are inverses of  $f: A \to B$ , then q = q'.
- E6.1.24  $f \circ id_A = f$  and  $id_A \circ f = f$
- T6.2.18 bijective 

  has an inverse
- L7.3.19 If  $x \in \mathsf{WFF}^+(\Sigma)$ , then assigning false to all elements of  $\Sigma$  makes xevaluate to false.
- T7.3.20  $\sim (\forall x \in \mathsf{WFF}(\Sigma), \exists y \in \mathsf{WFF}^+(\Sigma), y \equiv x) \equiv x$
- $\exists x \in \mathsf{WFF}(\Sigma) \ \forall y \in \mathsf{WFF}^+(\Sigma) \ y \not\equiv x \text{ aka } \sim \text{(not) must be included in the}$ definition of WFF.
- L8.1.5 Let  $d, n \in \mathbb{Z}$  with  $d \neq 0$ . Then  $d \mid n \Leftrightarrow n/d \in \mathbb{Z}$
- L8.1.9 Let  $d, n \in \mathbb{Z}$ . If  $d \mid n$ , then  $-d \mid n$  and  $d \mid -n$  and  $-d \mid -n$
- L8.1.10 Let  $d, n \in \mathbb{Z}$ . If  $d \mid n$  and  $d \neq 0$ , then  $|d| \leq |n|$
- L8.2.5 Prime Divisor Lemma (non-standard name):
  - Let  $n \in \mathbb{Z}_{\geq 2}$ . Then n has a prime divisor.
- P8.2.6 sizes of prime divisors:
  - Let n be a composite positive integer. Then n has a prime divisor  $p < \sqrt{n}$ .
- T8.2.8 there are infinitely many prime numbers
- T8.3.13  $\forall n \in \mathbb{Z}^+, \exists ! \ell \in \mathbb{Z}_{\geq 0}$  and  $a_0, a_1, \ldots, a_\ell \in \{0, 1, \ldots, b-1\}$  such that <the definition of base-b representation> holds.

- L8.4.11 If  $x, y, r \in \mathbb{Z}$  such that  $x \bmod y = r$ , then gcd(x, y) = gcd(y, r).
- Let  $a, b, c, d \in \mathbb{Z}$  and  $n \in \mathbb{Z}^+$  s.t.  $a \equiv b \pmod{n}$  and  $c \equiv d \pmod{n}$ .
  - P8.6.6 **addition**: Then  $a + c \equiv b + d \pmod{n}$
  - P8.6.13 **multiplication**: Then  $ac \equiv bd \pmod{n}$
- T9.3.4 Let R be an equivalence relation on a set A. Then A/R is a partition of A.
- T9.3.5 If  $\mathscr{C}$  is a partition of A, then there is an equivalence relation of R on A such that  $A/R = \mathscr{C}$ .
- L9.5.5 Consider a partial order  $\leq$  on set A.

- · A smallest element is minimal.
- · There is at most one smallest element.
- L10.2.1 Let G be a graph.
  - ullet L10.2.1a If G is connected, then any two distinct vertices of G can be connected by a path
  - L10.2.1b If vertices v and w are part of a circuit in G and one edge is removed from the circuit, then there still exists a trail from v to w in G.
  - L10.2.1c If G is connected and G contains a circuit, then an edge of the circuit can be removed without disconnecting G.
